

Certified Agile Fundamentals “ICAgile-ICP”

Course Description

In this class you will experience working in a truly agile way through a series of specially designed activities and discussions to let you see and feel the difference. You will be able understand the basics of lean thinking and visualize your value stream. You will then understand and choose the agile practices that are best for your context. Of course, we'll also cover agile values and the manifesto, Scrum basics, Kanban basics, and many of the common practices to be found in the agile world. You will understand exactly how these methods can improve your current way of work. When we are done, you will have the fundamentals needed to start your agile journey as well as a concrete plan for you and your teams to start seeing value right away.

Target Audience

Since the ICP is foundational and the gateway to all other ICAgile tracks, the ICP certification has the broadest target audience. It is appropriate for those new to the agile world, and for practitioners who recognize the need to focus on “being” agile in addition to “doing” agile.
